This project is critical to ensuring the long-term reliability of the water and wastewater infrastructure. The goal of this newsletter is to enhance community awareness and keep our customers apprised of project progress through ongoing construction updates. This newsletter is updated periodically and posted on the Seacoast Utility Authority website linked above.

What’s Happening On-Site

- Lanzo Corporation (the Contractor) has continued construction requiring the use of lane closures. Final restoration work will continue along Northlake Boulevard East of Northlake Bridge.

Looking Ahead

- Short-term localized restoration work will continue in various locations East of Northlake Bridge within the outside lanes and sidewalks. This work consists primarily of sidewalk and curbing replacement.
- No further impacts to water and sewer service are expected.
- Night-time work is anticipated in the next one to two weeks to install the final layer of asphalt in the project area East of Northlake Bridge.
- Final restoration of the right-of-way West of Northlake Bridge is nearly complete. Restoration of the right-of-way East of Northlake Bridge is projected to be complete by mid-December 2020.
- See map on next sheet for lane closure information.
- The next newsletter will be issued December 14, 2020.

Schedule

- Work is planned to continue thru December 2020.

**Construction Area**

The Seacoast Utility Authority is upgrading water and sewer infrastructure along Northlake Boulevard from Alternate A1A / 10th Street to US-1. The map below illustrates the construction area. Primary, along with the location and approximate timing of the project’s primary lane closures.

**Remaining Lane Closures**

Short-term lane closures will be required throughout the construction area through the remainder of the project.

Daytime lane closures currently include the closure of a single outside lane.

Nighttime lane closures, when used, may require closure of two lanes.
