Re: Phase I Environmental Site Assessment
Proposed NPB Country Club Improvements
951 U.S. Highway 1
North Palm Beach Palm Beach County, Florida 33408
Terracon Project No. HD247027

Dear Ms. Rodriguez, AIA:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Phase I Environmental Site Assessment (ESA) report for the above-referenced subject property (hereinafter known as the 'site'). This assessment was performed in accordance with Terracon Proposal PHD247027 dated May 3, 2024.

We appreciate the opportunity to be of service to you on this project. In addition to Phase I services, our professionals provide other environmental, geotechnical, construction materials, and facilities services on a wide variety of projects locally, regionally, and nationally. For more detailed information on all of Terracon's services please visit our website at www.terracon.com. If there are any questions regarding this report or if we may be of further assistance, please do not hesitate to contact us.

Sincerely,

Terracon Consultants, Inc.

Gabrielle K. Skelton
Staff Scientist

Shawn V. Ouellette
Environmental Group Manager

APPENDIX B Site Photographs

APPENDIX C Historical Documentation and User Questionnaire

APPENDIX D Environmental Database Information

APPENDIX E Credentials

APPENDIX F Description of Terms and Acronyms

Executive Summary

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal PHD247027, dated May 3, 2024, and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. The ESA was conducted under the supervision or responsible charge of Gabrielle K. Skelton, Environmental Professional. Gabrielle K. Skelton performed the site reconnaissance on August 22, 2024.

Findings and Opinions

A summary of the findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at 951 U.S. 1 in North Palm Beach, Palm Beach County, Florida, and is a portion of larger parent parcel which can be further identified on the Palm Beach County Property Appraiser with Parcel Control Number 68-43-42-08-00-000-1080. The site is specifically used as a maintenance area for the North Palm Beach Country Club.

Historical Information

Since at least 1940, the site has been developed as a golf course with vegetation and a pond. Sometime between 1958 and 1964, a warehouse maintenance building is visible and then another is added immediately south of existing building in 1986, remaining relatively unchanged through present day.

Records Review

The North Palm Beach Country Club, the site, located at 951 US Highway 1 is listed on the LUST, UST, AST, DWM CONTAM, RGA LUST, FINDS, ECHO, NPDES, UST FINDER, UST FINDER RELEASE, and ASBESTOS databases with Florida Department of Environmental Protection (FDEP) Facility ID 508623037 . Based on the files available for review of the FDEP online database, Nexus, a Supplemental Site Assessment Report (SSAR) dated December 2018 and prepared by BTEX Engineering, Inc. (BTEX) noted that the site had historically maintained 1 550-gallon AST containing unleaded gasoline as well as two 4,000-gallon USTs which contained leaded gasoline, which were reportedly removed from the site on August 20, 1991. Prior to removal, in December of 1985, it was discovered by site personnel that one of the USTs ruptured. Then on April 13, 1987, the site was eligible for state administered cleanup under the Early Detection Initiative (EDI) program to address the petroleum discharge from the ruptured tank and site assessment activities

began to determine the extent of the contamination. Following the tank removal in 1991, it was determined shortly after that the onsite soil had not been impacted but the groundwater had been and a monitoring only plan was implemented. Additional sampling was conducted per the FDEP request, and the Contamination Assessment Report Addendum (CARA) was approved by the FDEP on April 13, 1995.

In a letter dated November 8, 2013, the site was notified of availability of funds through the Petroleum Restoration Program (PRP) to initiate cleanup efforts. A Supplemental Site Assessment report dated May 2016, documented groundwater monitoring from December 2015 through April 2016, the groundwater samples collected indicated that the petroleum contamination no longer persisted in the on-site groundwater. In May 2018, the site again was prompted to continue groundwater sampling through the PRP, and the results of the collected groundwater samples indicated that groundwater contamination was still no longer present. Based on these results, the site received a Site Rehabilitation Completion Order as noted in a letter from the FDEP dated June 25, 2019. Additionally, there were no files for review on Nexus indicating that a discharge or spill has occurred since the issued SRCO, therefore the site is not considered a REC.

Site Reconnaissance

Terracon conducted the site reconnaissance on August 22, 2024, and was escorted by Mr. James Anthony, Village of North Palm Beach Facilities Manager. During the reconnaissance Terracon observed multiple ASTs, two in use containing fuel, as well as multiple 55-gallon drums containing used oil and fertilizers. Additionally, pallets of fertilizer were observed throughout the maintenance area. Small areas of stained concrete and pavement were visible throughout the site, specifically east of the maintenance building and did not appear indicative of large spills or discharges. The areas of stained pavement and concrete constitute a *de minimis* condition.

Adjoining Properties

The site is adjoined to the north, east, south, and west by the parent parcel, North Palm Beach County Club.

Additional Services

Radon Records Review

According to the Palm Beach County Department of Health, the site is located in EPA Zone 3, which has a predicted average indoor screening level of less than 2 picoCuries of radon per liter of air (pCi/L). The EPA recommends a guideline action level of 4.0 pCi/L for annual average indoor radon concentrations in residential properties. The action level is based on an exposure of 18 hours per day for 40 years. According to a U.S. Department of Energy environmental assessment, radon is much less of a concern in commercial buildings than in residential buildings as these buildings usually have mechanical ventilation and

occupants are typically not in the buildings as many hours a week as they are in their homes. No action level has been established for commercial buildings or occupational exposure.

100% Gopher Tortoise and Burrowing Owl Survey

This portion of the report is provided under separate cover by Terracon, and titled "Gopher Tortoise & Florida Burrowing Owl Survey Report" dated August 29, 2024.

Conclusions

The following Recognized Environmental Conditions (RECs) or Controlled RECs (CRECs) were identified in connection with the site:

- The historical use of the site and the surrounding parent parcel is considered an REC. The site and parent parcel were used as a golf course with associated maintenance area from sometime before 1940 through present day. These activities have involved the application, storage and handling of various pesticides, herbicides, and fertilizers as well as petroleum products, which may have impacted onsite soils and/or groundwater.

Recommendations

Based on the scope of services, limitations, and conclusions of this assessment, Terracon recommends the following additional actions:

- Terracon recommends conducting additional investigation to evaluate subsurface conditions associated with the identified REC.

1.0 Introduction

1.1 Site Description

Site Name	Proposed NPB Country Club Improvements
Site Location/Address	951 U.S. 1, North Palm Beach Palm Beach County, Florida
Parcel Control Number	Palm Beach County Property Appraiser's Parcel Control # 68-43-42-08-00-000-1080
Land Area	Approximately 4.6-acres
Site Improvements	Site is improved with a maintenance building, associated storage and parking areas, as well as a pond.
Anticipated Future Site Use	Continued use as a maintenance area
Reason for the ESA	Environmental due diligence associated with proposed construction

The location of the site is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the USGS 7.5-minute series topographic map. The site and adjoining properties are depicted on the Site & Vicinity Map, which is included as Exhibit 2 of Appendix A. The site and site features are depicted on the Site Diagram, which is included as Exhibit 3. Acronyms and terms used in this report are described in Appendix F.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal PHD247027, dated May 3, 2024, and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. Recognized environmental conditions are defined by ASTM E1527-21 as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." This ESA includes consideration of the movement of hazardous substances and petroleum products in any form, including migration of vapor in the subsurface. A de minimis condition is not a recognized environmental condition.

This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews (including local government inquiries, as applicable), and a visual noninvasive reconnaissance of the site and adjoining

properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

PFAS are a family of compounds which are considered emerging contaminants of concern due to their mobility and longevity in the environment. PFAS has been used in many products, including but not limited to fire-fighting foam, anti-stick coatings, stain and water-repellent coatings, electroplating, and paper products, among others. On July 8, 2024, US EPA designated two PFAS compounds, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), including their salts and structural isomers, as hazardous substances under CERCLA; accordingly, PFOA and PFOS will be evaluated within the scope of E1527-21. Please note that PFAS compounds are ubiquitous in the environment and this limited review is not to be construed as confirmation that PFAS compounds are not present in, at or under the site.

As requested by the client, the following additional services were performed:

- Radon Records Review
- 100% Gopher Tortoise and Burrowing Owl Survey

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations, and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, the information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances, petroleum products or PFAS compounds may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of CPZ Architects. Use or reliance by any other party is prohibited without the written authorization of CPZ Architects and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement

for Services. The limitation of liability defined in the Agreement for Services is the aggregate limit of Terracon’s liability to the client and all relying parties.

The continued viability of this report is subject to ASTM E1527-21 Section 4.6. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user’s responsibilities in Section 6 of ASTM E1527-21.

1.6 Client Provided Information

Prior to the site visit, James Anthony, the client’s representative, was asked to provide the following user questionnaire information as described in ASTM E1527-21 Section 6.

Client Questionnaire Responses

Client Questionnaire Item	Client Did Not Respond	Client’s Response		
		N/A	Yes	No
Actual Knowledge of Environmental Liens or Activity Use Limitations (AULs) that may encumber the site.				
Actual Knowledge of Activity Use Limitations (AULs) that may encumber the site.				X
Specialized Knowledge or Experience that is material to a REC in connection with the site.			X	
Actual Knowledge of a Lower Purchase Price because contamination is known or believed to be present at the site.				X
Commonly Known or Reasonably Ascertainable Information that is material to a REC in connection with the site.			X	
Obvious Indicators of Releases at the site.				X

N/A = Not Applicable

Terracon’s consideration of the client provided information did identify RECs associated with the site due to historic and current use as a golf course. A copy of the questionnaire is included in Appendix C.

2.0 Physical Setting

Physical Setting Information	Source
Topography	

Physical Setting Information		Source
Site Elevation	Approximately 14 feet above sea level	USGS Topographic Map, Riviera Beach, FL (1983). (Appendix A)
Topographic Gradient	Relatively flat with a slight gradient to the west	
Closest Surface Water	Multiple on site water features	
Soil Characteristics		
Soil Type	Quartzipsamments fine sand	Palm Beach County, FL Soil Survey Dated 1974 and Natural Resources Conservation Service (NRCS) Soil Survey: http://websoilsurvey.nrcs.usda.gov/app
Description	High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.	
Geology/Hydrogeology		
Formation	Anastasia Formation	Schmidt, Walter, Florida Geological Survey, Open File Report 80, Text to Accompany the Geological Map of Florida, 2001
Description	The Anastasia Formation, named by Sellards (1912), is composed of interbedded sands and coquinoid limestones. The most recognized facies of the Anastasia sediments is an orangish brown, unindurated to moderately indurated, coquina of whole and fragmented mollusk shells in a matrix of sand often cemented by sparry calcite. Sands occur as light gray to tan and orangish brown, unconsolidated to moderately indurated, unfossiliferous to very fossiliferous beds. The Anastasia Formation forms part of the surficial aquifer system.	

Physical Setting Information		Source
Estimated Depth to First Occurrence of Groundwater	Approximately 7 feet below ground surface (bgs)	<i>Supplemental Site Assessment Report</i> dated December 2018, prepared for the site and prepared by BTEX Engineering, Inc.
*Hydrogeologic Gradient	Not known - may be inferred to be parallel to topographic gradient (primarily to the west)	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.0 Historical Use Information

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, and Sanborn Maps

Readily available historical USGS topographic maps, selected historical aerial photographs (at approximately 10-to-15-year intervals) and historical fire insurance maps produced by the Sanborn Map Company were reviewed to evaluate land development and obtain information concerning the history of development on and near the site. Reviewed historical topographic maps and aerial photographs, are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from EDR to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

- USGS Topographic maps:
 - Riveria Beach, FL: 1946, 1949, 1967, 1983, 2012, 2015, 2018, 2021 (1:24,000)
- Aerial photographs:
 - UF aerial photographs: 1940, 1953;
 - USGS aerial photographs: 1958, 1995, 1999;

- FDOT aerial photographs: 1964, 1968, 1973, 1975, 1986, 1991;
- USDA aerial photographs: 2007, 2010, 2015, 2019;
- Microsoft Bing Maps/TomTom: 2023;

Historical Maps and Aerial Photographs

Direction	Description
Site	Since at least 1940, the site has been developed as a golf course with vegetation and a pond. Sometime between 1958 and 1964, a warehouse maintenance building is visible and then another is added immediately south of existing building in 1986, remaining relatively unchanged through present day.
North	Since at least 1940, the area (parent parcel) has been developed as a golf course with vegetation and ponds with an intracoastal waterway beyond. Between 1973 and 1986, the intracoastal waterway is developed with multi-tenant apartments and remains relatively unchanged through present day.
East	Since at least 1940, the area (parent parcel) has been developed as a golf course with vegetation and ponds with US Highway 1 beyond. Sometime between 1968 and 1973, tennis courts are visible beyond the golf course, along the eastern property boundary of the parent parcel, and the area remains relatively unchanged through present day.
South	Since at least 1940, the area (parent parcel) has been developed as a golf course with vegetation and ponds as well as a clubhouse building with associated parking. Sometime between 1958 and 1964, the clubhouse is expanded, and development of residential homes are visible within the gold course. By 1975, residential development is completed, and the area remains relatively unchanged through present day.
West	Since at least 1940, the area (parent parcel) has been developed as a golf course with vegetation and ponds with an intracoastal waterway beyond. Sometime between 1958 and 1964, development of residential homes are visible beyond the gold course. By 1975, residential development is completed, and the area remains relatively unchanged through present day.

3.2 Historical City Directories

The city directories used in this study were made available through EDR (selected years reviewed: 1959-2020) and were reviewed at approximate five-year intervals, if readily available. The current street address for the site was identified as 901 & 951 U.S. Highway 1.

Historical City Directories

Direction	Description
Site	<u>901 & 951 U.S. Highway 1 (Parent Parcel)</u> 1992-2024 North Palm Beach country Club
North, East, South, West	<u>901 & 951 U.S. Highway 1 (Parent Parcel)</u> 1992-2024 North Palm Beach country Club

3.3 Site Ownership

Based on a review of information obtained from the Palm Beach County Property Appraiser’s online records, the current site owner is Village of North Palm Beach. See a copy of Property Appraiser information contained in Appendix C.

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the site was not listed on the EC or IC databases. Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

The following individuals were interviewed regarding the current and historical use of the site.

Interviews

Interviewer	Name	Title	Date
Gabrielle Skelton	James Anthony	Village of North Palm Beach Facilities Manager	August 22, 2024

Terracon interviewed Mr. James Anthony, Village of North Palm Beach Facilities Manager, during the site reconnaissance conducted on August 22, 2024. Mr. Anthony indicated that he has been familiar with the site for approximately 6 years and the site has been operating as a golf course since the 1920's. Mr. Anthony noted that he was unaware of any pending, threatened, or past environmental litigation; possible violations of environmental laws; possible property restrictions; or site use limitations.

3.7 Prior Report Review

Terracon requested the client provide any previous reports they are aware of for the site. The following previous report was provided by the client to Terracon for review.

- Surface Water Sampling - North Palm Beach Country Club
Prepared by: Terracon Consultants, Inc.
Dated: March 15, 2022
Terracon Project No.: HD227013

This sampling report was prepared to document surface water sampling for assessment of the presence of potential impacts resulting from the current and/or historical use of the property. Surface water samples collected from the seven on-site ponds/lakes were analyzed for the following:

- Arsenic and lead by EPA Method 6010/6020
- Ammonia- Nitrogen by EPA Method 350.1
- Conductivity/ Salinity
- Nitrate-Nitrite by EPA Method 300/9056/353.2
- Organochlorine Pesticides (OCPs) by EPA Method 8081
- Organophosphorus Pesticides (OPPs) by EPA Method 8141
- Total Phosphorous by EPA Method 365.4
- Organophosphate Herbicides by EPA Method 8141
- Organochlorine Herbicides by EPA Method 8151

In addition to the above parameters, the surface water sample collected from the pond/lake located in the vicinity of the on-site maintenance building (Pond 1/ SW-1) was analyzed for the following parameters:

- Volatile Organic Compounds (VOCs) by EPA Method 8260
- Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270
- Cadmium and chromium by EPA Method 6010/6020

A summary of parameters detected at concentrations exceeding their respective laboratory method detection limits (MDLs) in surface water samples collected during this assessment is provided in the following table.

Table 1. Summary of Detections in Surface Water Samples

Sample ID			SW-1	SW-2	SW-3	SW-4	SW-5	SW-6	SW-7
Sample Date			2/21/22	2/21/22	2/21/22	2/21/22	2/21/22	2/21/22	2/21/22
Parameter	Units	SWCTL							
Arsenic	µg/L	50	8.2I	15	12	18	16	2.5 I	4.6 I
Conductivity	umho/cm	N/A	660	16,000	5,500	1,100	6,500	710	690
Ammonia	mg/L	0.02	0.10 U	0.13 I	0.11 I	0.15 I	0.10 U	0.10 U	0.10 U
Nitrate		N/A	0.084 U	0.48	1.0	0.81	0.89	0.84 U	0.19
Phosphorous		N/A	0.12	8.1	0.076 I	0.15	0.13	0.20	10
Salinity	ppth	N/A	2.0 U	11	3.7	2.0 U	4.5	2.0 U	2.0 U

Notes:

µg/L = micrograms per liter

umho/cm = micromhos per centimeter at 25 degrees Celsius

mg/L = milligrams per liter

ppth = parts per thousand

"U" value following reported concentration indicates that the reported value is less than the MDL

"I" value following reported concentration indicates that the reported value is less than the MDL and greater than the practical quantitative limit (PQL)

Based on the findings of this surface water sampling, it appears that the operation of a golf course at the site has not resulted in the presence of tested parameters being present in the surface water samples collected at concentrations exceeding applicable SWCTLs.

4.0 Records Review

Regulatory database information was provided by EDR, a contract information services company, in a report dated August 6, 2024. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated. The scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient, and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely

vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Terracon reviewed standard federal, state, and tribal environmental record sources within the approximate minimum search distances as required by ASTM E1527-21 and presented in Table 2 of Section 8.0 (Types of Government Records to be Reviewed). Further, to enhance and supplement the standard environmental record sources, Terracon reviewed additional federal, state, tribal, local, and proprietary environmental record sources, provided by the database firm, if potentially useful and reasonably ascertainable. Please refer to Appendix D (the environmental regulatory database report) for the number of listings within each database reviewed and database definitions and descriptions.

Due to conversion of address data to location coordinates and the accuracy of government records, the facility locations depicted in the environmental regulatory database report may not match actual physical locations. As such, Terracon attempted to field-verify the actual distances of facilities of concern from the site. The following table summarizes the site-specific information provided by the database and/or gathered by this office for identified facilities. Facilities are listed in order of proximity to the site. An additional discussion for selected facilities follows the summary table.

Listed Facilities

Facility Name and Location	Estimated Distance/ Direction/Gradient	Database Listings	Findings Summary
North Palm Beach Country Club 951 US Highway 1	Site	LUST, UST, AST, DWM CONTAM, RGA LUST, FINDS, ECHO, NPDES, UST FINDER, UST FINDER RELEASE, ASBESTOS	No REC, based on file review below.
Juneau Beach Chevron 1011 US Highway 1	Approximately 700 feet North/Northeast / Up/Cross-gradient	EDR Hist Auto	No REC, based on distance
Marina Bay Condominium	Approximately 800 feet East / Up-gradient	UST, Financial Assurance, UST FINDER	No REC, based on distance

Facility Name and Location	Estimated Distance/ Direction/Gradient	Database Listings	Findings Summary
1030 US Highway 1			
MEADOWS INC 1060 US Highway 1	Approximately 800 feet East / Up-gradient	RCRA-VSQG	No REC, based on distance

North Palm Beach Country Club

The North Palm Beach Country Club, the site, located at 951 US Highway 1 is listed on the LUST, UST, AST, DWM CONTAM, RGA LUST, FINDS, ECHO, NPDES, UST FINDER, UST FINDER RELEASE, and ASBESTOS databases with Florida Department of Environmental Protection (FDEP) Facility ID 508623037 . Based on the files available for review of the FDEP online database, Nexus, a Supplemental Site Assessment Report (SSAR) dated December 2018 and prepared by BTEX Engineering, Inc. (BTEX) noted that the site had historically maintained 1 550-gallon AST containing unleaded gasoline as well as two 4,000-gallon USTs which contained leaded gasoline, which were reportedly removed from the site on August 20, 1991. Prior to removal, in December of 1985, it was discovered by site personnel that one of the USTs ruptured. Then on April 13, 1987, the site was eligible for state administered cleanup under the Early Detection Initiative (EDI) program to address the petroleum discharge from the ruptured tank and site assessment activities began to determine the extent of the contamination. Following the tank removal in 1991, it was determined shortly after that the onsite soil had not been impacted but the groundwater had been and a monitoring only plan was implemented. Additional sampling was conducted per FDEP request, and the Contamination Assessment Report Addendum (CARA) was approved by the FDEP on April 13, 1995.

In a letter dated November 8, 2013, the site was notified of availability of funds through the Petroleum Restoration Program (PRP) to initiate cleanup efforts. A Supplemental Site Assessment report dated May 2016, documented groundwater monitoring from December 2015 through April 2016, the groundwater samples collected indicated that the petroleum contamination no longer persisted in the on-site groundwater. In May 2018, the site again was prompted to continue groundwater sampling through the PRP, and the results of the collected groundwater samples indicated that groundwater contamination was still no longer present. Based on these results, the site received a Site Rehabilitation Completion Order as noted in a letter from the FDEP dated June 25, 2019. Additionally, there were no files for review on Nexus indicating that a discharge or spill has occurred since the issued SRCO, therefore the site is not considered a REC.

The remaining facilities listed in the database report do not constitute RECs associated with the site at this time based upon regulatory status, apparent topographic gradient,

and/or distance from the site. None of the remaining facilities are located at or adjacent to the site.

4.2 Local Agency Inquiries

Agency Contacted/ Contact Method	Response
Florida Department of Environmental Protection (FDEP) / Email on August 6, 2024	Ms. Susan Stephens with the FDEP responded via email on August 6, 2024, providing documents which are further discussed above in Section 4.1.
Florida Department of Health (FDOH) / Email on August 6, 2024	Ms. Kendra Washington with the FDOH responded via email on August 8, 2024, providing documents associated with the parent parcel, not associated with the site.
North Palm Beach Fire Rescue (NPBFR) / Email on August 6, 2024	Ms. Kim Cawley responded via email on August 8, 2024, stating no records were available for the site.

5.0 Site Reconnaissance

5.1 General Site Information

Information contained in this section is based on a visual reconnaissance conducted while walking through the site and the accessible interior areas of structures, if any, located on the site. The site and adjoining properties are depicted on the Site Diagram, which is included in Exhibit 2 of Appendix A. Photo documentation of the site at the time of the visual reconnaissance is provided in Appendix B. Credentials of the individuals planning and conducting the site visit are included in Appendix E.

General Site Information

Site Reconnaissance				
Field Personnel	Gabrielle K. Skelton			
Reconnaissance Date	August 22, 2024			
Weather Conditions	Clear, Sunny 85°F			
Site Contact/Title	James Anthony			
Building Description				
Building Identification	Building Use	Approx. Construction Date	Number of Stories	Approx. Size (sqft)

Site Reconnaissance				
Maintenance Building	Maintenance building with associated office space and storage	1960's	1	8,000
Chemical Storage Shed	Chemicals, fertilizer, pesticides, herbicides, etc. storage	2000's	1	300
Site Utilities				
Drinking Water	Seacoast Water Utilities			
Wastewater	Seacoast Water Utilities			
Electric	Florida Power and Light (FPL)			
Natural Gas	Not connected			

5.2 Overview of Current Site Occupants and Operations

The site currently operates as the maintenance area for the North Palm Beach Country Club.

5.3 Site Observations

The following table summarizes site observations and interviews. Affirmative responses (designated by an "X") are discussed in more detail following the table.

Site Characteristics

Category	Item or Feature	Observed or Identified
Site Operations, Processes, and Equipment	Emergency generators	
	Elevators	
	Air compressors	X
	Hydraulic lifts	X
	Dry cleaning	
	Photo processing	
	Ventilation hoods and/or incinerators	
	Waste treatment systems and/or water treatment systems	
	Heating and/or cooling systems	
	Paint booths	
	Sub-grade mechanic pits	
	Wash-down areas or carwashes	
	Pesticide/herbicide production or storage	X
	Printing operations	
	Metal finishing (electroplating, chrome plating, galvanizing, etc.)	
	Salvage operations	
	Oil, gas, or mineral production	
	Other processes or equipment	
Aboveground Chemical or Waste Storage	Aboveground storage tanks	X
	Drums, barrels, and/or containers ≥ 5 gallons	X
	MSDS or SDS	
Underground Chemical or Waste Storage, Drainage or Collection Systems	Underground storage tanks or ancillary UST equipment	
	Sumps, cisterns, French drains, catch basins, and/or dry wells	
	Grease traps	
	Septic tanks and/or leach fields	
	Oil/water separators, clarifiers, sand traps, triple traps, interceptors	
	Pipeline markers	
	Interior floor drains	
	Transformers and/or capacitors	X

Electrical Transformers/PCBs	Other equipment	
Releases or Potential Releases	Stressed vegetation	
	Stained soil	X
	Stained pavement or similar surface	X
	Leachate and/or waste seeps	
	Trash, debris, and/or other waste materials	
	Dumping or disposal areas	
	Construction/demolition debris and/or dumped fill dirt	
	Surface water discoloration, odor, sheen, and/or free-floating product	
	Strong, pungent, or noxious odors	
	Exterior pipe discharges and/or other effluent discharges	
Other Notable Site Features	Surface water bodies	X
	Quarries or pits	
	Wastewater lagoons	
	Wells	

Site Operations, Processes, and Equipment

Air compressors

Terracon observed an air compressor in the maintenance building, which was located on a concrete surface. Surficial staining or releases were not observed on the concrete in the vicinity of the air compressor at the time of the visual reconnaissance.

Hydraulic lifts

Terracon observed one aboveground hydraulic lift in the tire shop during the site reconnaissance. The lift is used for golf cart maintenance activities and is operational. Evidence of staining and/or hydraulic fluid releases were not observed in the vicinity of the lifts and/or hydraulic fluid reservoirs at the time of the site visit.

Pesticide/herbicide production or storage

Terracon observed the storage of pesticide/herbicide/fertilizer in various containers on concrete throughout the maintenance area. Minor staining or other signs of releases were observed in the vicinity of these containers. Additionally, during the site visit Terracon was informed that the shed on the north side of the site, in the immediate vicinity of the washdown area, reportedly contained various chemicals, herbicides, pesticides, fertilizers.

Access to the shed was not acquired due to the shed being locked and a key not available at the time of the reconnaissance. Minor evidence of staining or releases to unpaved areas nearest to the Pesticide/herbicide storage areas were observed at the time of the site visit.

Aboveground Chemical or Waste Storage

Aboveground storage tanks

Terracon observed two 500-gallon ASTs, one containing diesel and one containing unleaded fuels, located to the east of the maintenance building on a concrete pad. Minor staining on the grass was observed immediately north of the fuel ASTs. Additionally, Terracon observed two AST's that were no longer in use at the site including one approximate 700-gallon AST was located east of the maintenance area and was historically used for water storage, and the approximate 250-gallon AST was stored in a metal secondary containment unit but is unknown what the tank historically contained

Drums, barrels, and/or containers \geq 5 gallons

Multiple steel 55-gallon drums were observed on concrete, immediately east of the maintenance building. Three drums were labeled as containing used motor oil and were equipped with dispensers; and three were labeled containing fertilizer. Minor staining or other signs of releases were observed in the vicinity of these drums.

MSDS or SDS

During the site reconnaissance Terracon did not observe MSDS or SDS for the onsite chemicals. A follow up phone call and voicemail message was sent Mr. Mike Metzger, onsite maintenance manager, requesting copies of the available MSDS or SDS, but at the issuance of this report copies have not yet been received.

Wash-down areas or carwashes

Terracon observed a washdown area to the immediate north of the maintenance building which is reportedly used as an area to wash down the various equipment used to maintain the country club, primarily mowers to wash off the accumulated grass clippings. Minor staining or other signs of release were observed in the vicinity of the washout area. It should also be noted that the washout area has an associated drain, but due to the location, this area is up-gradient to the east adjoining pond in which it drains into.

Electrical Transformers/PCBs

Transformers and/or capacitors

During Terracon's site visit, one pad-mounted transformer, owned and serviced by Florida Power & Light (FPL), was observed in the eastern portion of the site; however, no

information with regard to PCB content of the transformer fluids was observed. Some transformers contain mineral oil which may contain PCBs.

FPL maintains responsibility for the transformers, and if the transformers were "PCB contaminated," FPL is not required to replace the transformer fluids until a release is identified. However, evidence of current or prior releases was not observed in the vicinity of the electrical equipment during the site reconnaissance.

Releases or Potential Releases

Stained soil

One small area of stained grassed soil was observed to the north of the ASTs. The stained area did not appear indicative of large spills or discharges. The grassed soil in the areas of the staining was in fair to good condition; which constitutes a *de minimis* condition.

Stained pavement or similar surfaces

Multiple small areas of stained concrete and pavement were visible throughout the site specifically on the east side of the maintenance building. These stained areas did not appear indicative of large spills or discharges. The pavement and concrete in the areas of the staining was in fair to good condition.

Other Notable Site Features

Surface water bodies

Terracon observed an on-site retention pond in the northeast portion of the site. No sheen or odor was observed in the vicinity of the pond.

Wells

Terracon observed a well located immediately west of the approximate 700-gallon AST, which was located east of the maintenance area and no longer in use. Historically, this well was reportedly utilized to pump the water from the east adjoining pond to the aforementioned AST. No evidence of staining or releases to the areas nearest to the well or AST was observed at the time of the site visit.

6.0 Adjoining Property Reconnaissance

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	North Palm Beach Country Club (Parent Parcel)
East	North Palm Beach Country Club (Parent Parcel)
South	North Palm Beach Country Club (Parent Parcel)
West	North Palm Beach Country Club (Parent Parcel)

RECs were observed with the adjoining properties.

7.0 Additional Services

Per the agreed scope of services specified in the proposal, the following additional service(s) were conducted.

7.1 Radon Records Review

Radon is a naturally occurring radioactive gas produced through the natural decay of uranium to stable lead. It is odorless, tasteless, and invisible. Elevated concentrations of radon can be found in soils and rocks containing uranium, granite, shale, phosphate, and pitchblende. The locations of these materials are highly unpredictable. Elevated levels of radon may also be found in soils containing certain types of industrial wastes, such as the by-products from uranium or phosphate mining. Radon can accumulate inside structures at concentrations that may pose risks to human health. Indoor radon levels are influenced by building construction and the concentration of radon in the underlying soil.

Terracon reviewed the EPA Map of Radon Zones, prepared by the EPA and the U.S. Geological Survey, the site is located in EPA Zone 3 (Lowest Potential: less than 2 pCi/L). The EPA recommends a guideline-action level of 4 pCi/L for an annual average indoor radon concentration. In addition, Terracon reviewed the Florida Department of Community Affairs (DCA) Radon Protection Map for new large buildings. More than 5% of all new large buildings, single family homes and duplexes in areas of the Palm Beach County are expected to have annual radon levels above the US Environmental Protection Agency action level; however, the site is located in an area of the County where DCA has determined that radon controls are generally unnecessary to reduce the likelihood of elevated radon levels in new buildings. Based on this information, the site is considered to have a low potential for elevated indoor concentrations of radon gas.

100% Gopher Tortoise and Burrowing Owl Survey

This portion of the report is provided under separate cover by Terracon and titled "Gopher Tortoise & Florida Burrowing Owl Survey Report" dated August 29, 2024.

8.0 DECLARATION

I, Shawn V. Ouellette, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. I have developed and performed the All-Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Shawn V. Ouellette, P.G.

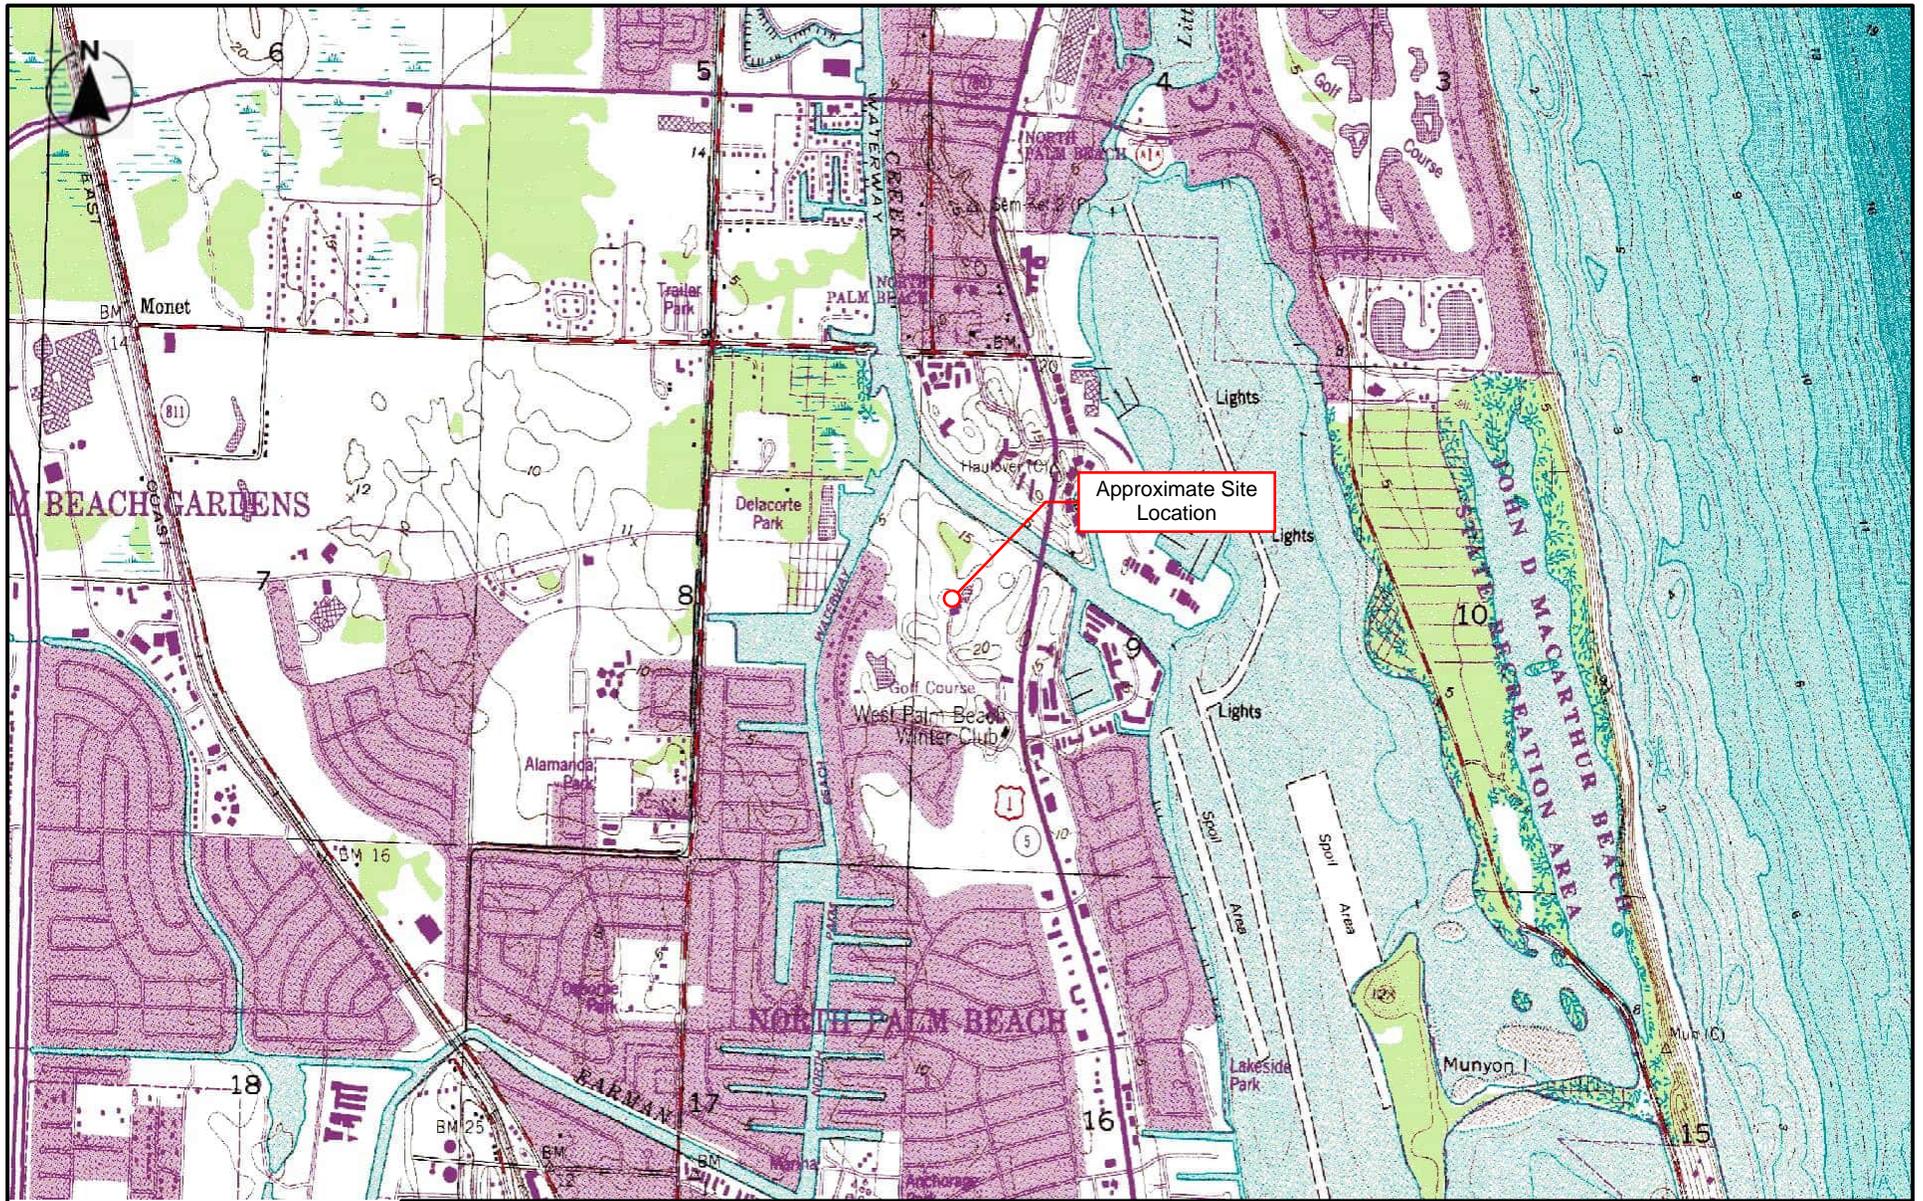

Environmental Group Manager

APPENDIX C
HISTORICAL DOCUMENTATION AND USER
QUESTIONNAIRE

ASTM E1527-21 User Questionnaire

Date Completed	08/09/2024	
Person Completing Questionnaire	Name: James Anthony Company: Village of North Palm Beach	Phone: 561.691.3443 Email: janthony@village-npb.org
Site Name	Proposed NPB Country Club Improvements	
Site Address	951 U.S. 1, North Palm Beach, FL 33408	
Point of Contact for Access	Name: James Anthony Company: Village of North Palm Beach	Phone: 561.691.3443 Email: janthony@village-npb.org
Access Restrictions or Special Site Requirements?	<input type="checkbox"/> No <input checked="" type="checkbox"/> Yes (If yes, please explain) vendors must be courteous of golfers/guests while transitting the course	
Confidentiality Requirements?	<input checked="" type="checkbox"/> No <input type="checkbox"/> Yes (If yes, please explain)	
Current Site Owner	Name: Village of North Palm Beach Company:	Phone: 561.691.3443 Email:
Current Site Operator	Name: Village of North Palm Beach Company:	Phone: 561.691.3443 Email:
Reasons for ESA (e.g., financing, acquisition, lease, etc.)	Construction of new wash-down facility and chemical storage.	
Anticipated Future Site Use		
Relevant Documents?	Please provide Terracon copies of prior Phase I or II ESAs, Asbestos Surveys, Environmental Permits or Audit documents, Underground Storage Tank documents, Geotechnical Investigations, Site Surveys, Diagrams or Maps, or other relevant reports or documents.	
ASTM User Questionnaire		
To qualify for one of the <i>Landowner Liability Protections (LLPs)</i> offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the " <i>Brownfields Amendments</i> "), the user must respond to the following inquiries required by 40 C.F.R. §§ 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the <i>environmental professional</i> . Failure to conduct these inquiries could result in a determination that " <i>all appropriate inquiries</i> " is not complete.		
1) Did a search of land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the site under federal, tribal, state, or local law (40 CFR 312.25)? <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)		
2) Did a search of land title records (or judicial records where appropriate) identify any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded against the site under federal, tribal, state, or local law (40 CFR 312.26)? <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)		
3) Do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312-28)? <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes (If yes, explain below) Village of NPB has operated this golf course since 1962		
4) Do you have actual knowledge of a lower purchase price because contamination is known or believed to be present at the site (40 CFR 312.29)? <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> Not applicable (If yes or Not applicable, explain below)		
5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)? For example, (a.) Do you know the past uses of the site? (b.) Do you know of specific chemicals that are present or once were present at the site? (c.) Do you know of spills or other chemical releases that have taken place at the site? (d.) Do you know of any environmental cleanups that have taken place at the site? <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes (If yes, explain below) Village of NPB has operated this golf course since 1962		
6) Based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence or likely presence of releases at the site (40 CFR 312.31)? <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes (If yes, explain below)		
Comments or explanations: This property has been a golf course since 1926 therefore common fertilizers and pesticides have been in use for almost 100 years.		

Please return this form with the signed authorization to proceed.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Registry ID: 110006387560

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

NPB CC IMPROVEMENTS
951 US 1
NORTH PALM BEACH, FL 33408

TARGET PROPERTY COORDINATES

Latitude (North):	26.829769 - 26° 49' 47.17"
Longitude (West):	80.063788 - 80° 3' 49.64"
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	593030.1
UTM Y (Meters):	2967757.5
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	17176307 RIVIERA BEACH, FL
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

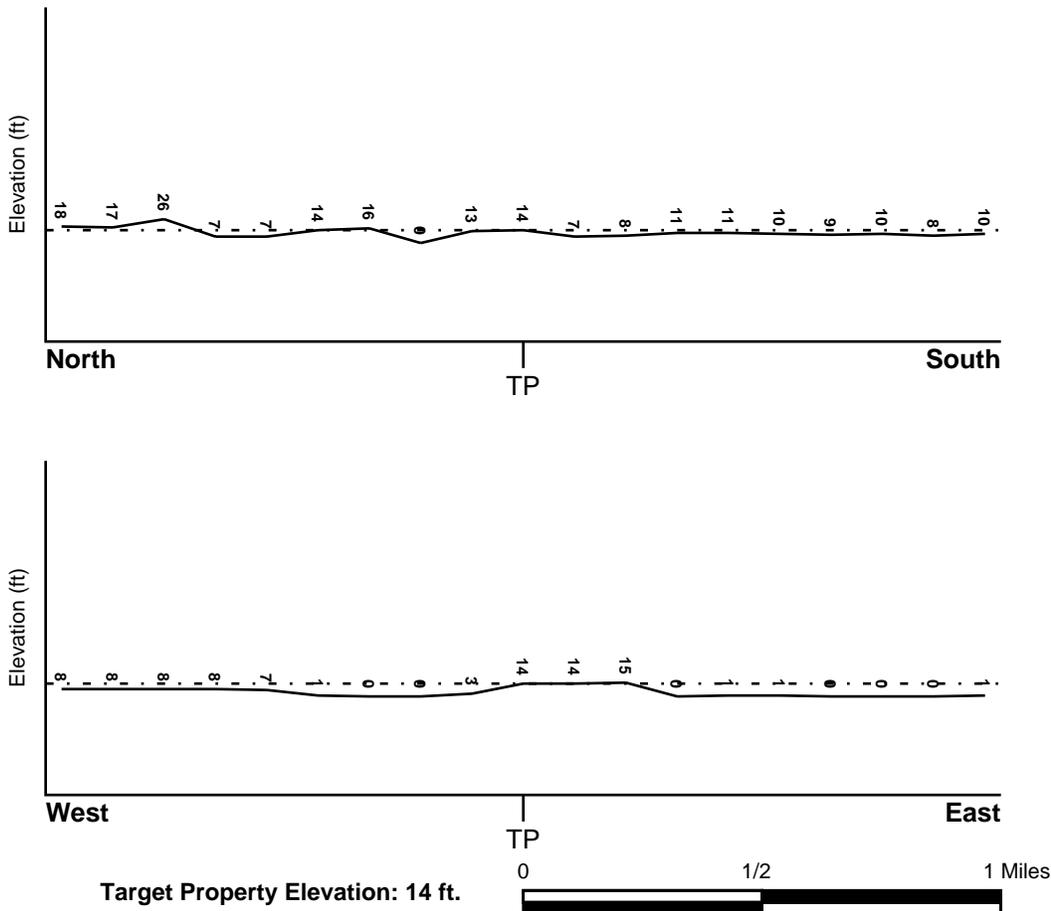

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
1202170001D	FEMA Q3 Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

1201920127B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
RIVIERA BEACH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
A3	1/8 - 1/4 Mile SE	N
9	1/4 - 1/2 Mile NE	NE
11	1/4 - 1/2 Mile SSE	NE
1G	1/4 - 1/2 Mile NE	NE
2G	1/8 - 1/4 Mile SE	N
3G	1/4 - 1/2 Mile SSE	NE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Quartzipsamments

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 4.5

Soil Map ID: 2

Soil Component Name: Arents

Soil Surface Texture: sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6
2	9 inches	31 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6
3	31 inches	72 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX E
CREDENTIALS

Shawn Ouellette, P.G.

Senior Geologist

PROFESSIONAL EXPERIENCE

Shawn has over 24 years of experience conducting environmental site assessments, remedial projects, geotechnical investigations, mining feasibility studies, well installations, well rehabilitation, soil, sediment, air, and water sampling. He is a senior geologist for Terracon's Florida Division and he provides environmental services at various locations statewide. Shawn is currently responsible for coordinating and implementing field activities for environmental site assessments (ESAs), well installations, and soil investigations for remedial actions and site assessment and characterization, including mechanical and electrical troubleshooting for remediation and sampling equipment.

Shawn's technical experience ranges from soil, sediment, and rock classification to groundwater and surface water investigations and monitoring, field activities, and subcontractor supervision, as well as data compilation, analysis, permit preparation and report writing. He is also experienced in personnel and project management and managing all aspects of the business from initial marketing to project completion.

PROJECT EXPERIENCE

School Board of Broward County – Broward, FL *

Project Manager. Responsible for site assessment of former agricultural 11-acre parcel that was a Debris Management and Storage Area a portion of the site is a water management and control feature that has been infilled. Completing assessment on former hazardous waste source areas and infilled areas for the FDEP Brownfields program. Completing a background study to compare regional conditions to the specific onsite sources to establish a background level to assist in risk based closure options. Duties included proposal preparation, field work, contractor oversight, permit preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field coordination and communication with multiple stakeholders.

Confidential Client - St Lucie County, FL

Project Manager. Responsible for site assessment of former parcel leased for citrus crop production to be converted to a warehouse facility. Approximately, 225-acre site with residual metals and agrichemical impacts. In addition, conducted limited geotechnical testing and soil evaluations for soil quality, foundation design, roadway and pavement design and finish floor levels. Generated recommendations for soil management of impacted and unsuitable material and groundwater that will be incorporated into the borrow allocation and placement and the dewatering activities. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field supervision.

Confidential Client – Boynton Beach, FL

Project Manager. Responsible for site assessment of former parcel leased for crop production and a former plant and tree nursery to be converted to a residential facility. Approximately, 7-acre site with residual metals and agrichemical impacts. Reevaluated former impacts and working with FDEP on a closure strategy to support the planned activities to utilize planned site

development to minimize groundwater and soil impacts and achieve closure. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field supervision.

Confidential Client – Palm Beach County, FL

Conducted geology and water quality assessment for proposed rock mining expansion. Field activities included drilling continuous soil cores in the target interval to determine material quality and collecting water profiles at 10 foot intervals to the target depth to determine the geochemical parameters. Duties included proposal preparation, field work, contractor oversight, report preparation, employee training, field coordination and communication with multiple stakeholders.

Ocean Breeze Golf Course – Boca Raton, FL

Project Manager. Responsible for site assessment of former 200 acre golf course in which 70 acres will be converted to a public park. Project being completed in conjunction with local adjacent stakeholders and parks commission to convert former impacted lands to a useable public park. Completed assessment on former golf course and completing a background study to develop site specific cleanup target levels to apply a risk based closure to the soil and groundwater, based on receptor pathways. Duties included proposal preparation, field work, contractor oversight permit preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field coordination and communication with multiple stakeholders.

City of Key West - Monroe County, FL *

Project Manager. Responsible for site assessment of former parcel owned by the US Navy and granted to the City of Key West project objective was to convert to commercial residential land use. Completed a soil and groundwater assessment to assist developers in conducting a removal of land use controls and convert land use. Conducted soil and groundwater assessment in an environmentally sensitive (tidally influenced) area of Key West adjacent to high security areas of Naval facility. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, stakeholder coordination and communication and field supervision.

Port of Fort Pierce – St Lucie County, FL *

Project Manager. Responsible for site assessment of former industrial 15-acre port with former citrus packing house and numerous former industrial businesses since the 1920s. Parcel leased by Derekor a mega yacht repair and build contractor. Completed assessment on former petroleum and hazardous waste source areas in and around an active port for the FDEP Brownfields program. Completed a background study to compare regional conditions to the specific onsite sources to establish and background level to assist in a risk based closure Duties included proposal preparation, field work, contractor oversight permit preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field coordination and communication with multiple stakeholders.

Solar Development Client - Putnam and Alachua County, FL *

Project Manager. Responsible for Phase I ESAS of proposed solar development facilities. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, and cost tracking.

South Florida Water Management District (SFWMD) C-43 Reservoir - LaBelle, FL *

Scientific support for J-Tech (Joint Venture: Tetra Tech & Jacobs) Construction Inspectors performing the construction inspections and Quality Assurance activities for the construction of the above-ground 10,700-acre SFWMD C-43 Reservoir Project (Packages #2, #3 & #4). Main duties involved identifying clay layer for slurry wall tie-in, oversight of 5-foot diameter relief well installations, and identification of slurry wall tie-in from above the second phase of dam construction.

***City of Key West - Monroe County, FL ***

Project Manager. Responsible for site assessment of former parcel leased by the Mosquito Control Division owned by the City and to be converted to residential housing. Completed an interim voluntary source removal for 792 tons of organochlorine pesticide-impacted soils and post-active remediation monitoring in an environmentally sensitive (tidally influenced) area of Key West. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field supervision.

Broward County Landfill - Fort Lauderdale, FL *

Task Manager. Responsible for conducting soil gas monitoring on methane extraction wells. Conducted operations and maintenance on vapor extraction system and extraction wells. Duties included data reduction, environmental reconnaissance, field sampling, and data and quality control (QC) evaluation.

Shawn Ouellette, P.G. (continued)

Florida Department of Environmental Protection (FDEP) State of Florida Hazardous Waste Cleanup Sites – Various Locations Statewide *

Assistant Project Manager. Responsible for conducting polyfluoroalkyl substances (PFAS) site assessments and groundwater screening on State of Florida Hazardous Waste Cleanup sites. Duties included report preparation, environmental reconnaissance, field sampling, and data and QC evaluation.

City of Key West Parcels - Monroe County, FL *

Task Manager. Responsible for Phase I and II ESAs of five city-owned parcels to be converted to residential housing. Completed a voluntary source removal work plan for 950 tons of petroleum-impacted soils in an environmentally sensitive (tidally influenced) area of Key West. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, cost tracking, client and regulatory interaction, and field supervision.

Confidential Clients, Three Parcels - Palm Beach County, FL *

Project Manager. Responsible for Phase I and II ESAs of three parcels. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, and cost tracking.

Conservation Collier Parcels - Collier County, FL *

Project Manager. Responsible for Phase I and II ESAs of three parcels. Duties included proposal preparation, report preparation, environmental reconnaissance, employee management, and cost tracking.

Pomcor Longview, LLC, Shady Oaks - Lake Wales, FL *

Task Manager. Conducted a site assessment in accordance with Chapter 62-780.600, Florida Administrative Code (FAC), which includes researching the site history; investigating the site's surficial geology; performing soil borings; installing and developing monitor wells; and collecting soil and groundwater samples for field and laboratory analyses at the former waste disposal areas at the property. The site assessment addressed soil and groundwater Constituents of Interest (COIs) in the three former waste disposal areas at the site: the Bone Yard Area, Disposal Area #1, and Disposal Area #2. Based on the results of the 2004 Phase I and II ESA, it was determined that each of these waste disposal areas was historically operated and closed without permits. A remedial action plan (RAP) was developed to cap the disposal areas in place coupled with restrictive covenants (i.e., deed restrictions). The FDEP approved the RAP in November 2012 and the remedial actions were completed in 2013. Long-term groundwater monitoring determined a stable plume of arsenic in groundwater, which would allow Chapter 62-780.680(2) Risk Management Options Level II – A No Further Action (NFA) with institutional controls (deed restriction) and engineer controls (soil cap) for closure with conditions for the former disposal areas of the Shady Oaks property.

Sabajo Gold Project, Sabajo Prospect Mine - Suriname *

Geologist. Collected surface water samples of surface water streams and lakes that are downstream of current or former illegal gold mining activities. The scope of the project was to establish a baseline of heavy metals and other contaminants being used by current illegal mining operations, prior to the commencement of large-scale gold mining. The project included using GPS and ATV to access remote areas of the jungle and collect water samples and then navigate the samples through customs and back into the United States (U.S.) for laboratory analysis.

Shawn, Ouellette, P.G. (continued)

SFWMD (SFWMDC) C-43 Mesocosm Study - Labelle, FL *

Geologist responsible for environmental surface water and sediment sampling activities and remedial action operations and maintenance for a 12-tank mesocosm study. Water was drawn in from the Caloosahatchee canal and routed through 12 mesocosm tanks. The 12 tanks were planted with combinations of either submerged aquatic vegetation (SAV) and/or emergent aquatic vegetation (EAV). Analytical and geochemical parameters were collected on a bi-weekly basis and submitted to the SFWMDC laboratory for analysis to determine nitrate and phosphate loads with respect to plant combinations within the tanks. Duties included work plan preparation, quality assurance manual (QAM) preparation, quality assurance project plan (QAPP) preparation, and surface water and sediment sampling. Ensured all samples and field and office procedures were conducted in accordance with the FDEP Standard Operating Procedures (SOP) Guidelines, and SFWMDC FQM.

National Park Service (NPS), Biscayne National Park - Homestead, FL *

Scientific Divers Assistant. Assisted the scientific diving team on the removal of derelict traps and fishing debris from the seafloor at the bottom of Biscayne National Park. Locations were offshore in 10 to 40 feet of water along patch reef fishing grounds.

SFWMD Comprehensive Everglades Restoration Program (CERP), Western Basins C-139 Annex - Clewiston, FL *

Geologist responsible for environmental assessment activities and remedial action planning and implementation for an 18,000-acre former citrus operation with phosphate impacts. Duties include environmental and geotechnical drilling oversight, work plan preparation, QAM preparation, QAPP preparation, soil and sediment classification, groundwater flow mapping, and water quality reporting. A site investigation was necessary for the SFWMDC in the CERP and great Everglades restoration effort. Ensured all samples and field and office procedures were conducted in accordance with the FDEP SOP Guidelines and SFWMDC FQM.

FDEP Skippers III - Cocoa, FL *

Geologist. Completed soil assessment and excavation of former plating facility with metals impacted soils and groundwater along Florida East Coast (FEC) railroad right-of-way (ROW). Oversight of sheet pile installation, soil excavation and backfilling activities, site restoration, monitoring well installations, soil and water quality sampling, and top-of-casing measurement. Was responsible for supervising and conducting fieldwork and report preparation. Shawn was to ensure field and office procedures were conducted in accordance with the FDEP SOP Guidelines and FEC criteria.

SFWMD Environmental Risk Assessments - Palm Beach, Martin, Hendry Okeechobee, and Polk Counties, FL *

Supervising Field Geologist responsible for environmental assessment activities and remedial action planning and implementation. Duties include environmental and geotechnical drilling oversight, soil and sediment classification, groundwater flow mapping, water quality reporting, and compaction testing oversight. A site investigation was necessary for the SFWMDC in the CERP and great Everglades restoration effort.

FDEP Contract – Various Locations Statewide, FL *

Geologist/Program Manager on the FDEP contract which included hazardous waste site cleanup, the Drycleaning Solvent Cleanup Program, the Site Investigation Section, and Brownfield and Comprehensive Environmental Response Compensation and Liability Act (CERCLA) sites. As Program Manager, Shawn was responsible for coordinating, managing and supervising site assessments, remedial actions, and operation and maintenance (O&M) at 37 drycleaning and orphaned hazardous waste sites throughout the State of Florida.

- Celebrity Cleaners, Longwood, FL – Dense non-aqueous phase liquid (DNAPL) site, in situ chemical oxidation (ISCO) first phase completed. The third phase, bioaugmentation, and biostimulation was completed with excellent results.

Shawn, Ouellette, P.G. (continued)

- 60 Minute Cleaners, Vero Beach, FL - Soil Vapor Extraction (SVE) system O&M, groundwater RAP for biostimulation at the source with positive results, RAP modifications
- Roberts Dry Cleaners, Lighthouse Point, FL - Cleanup complete, post active remediation monitoring (PARM).
- Webbs Cleaners, Riviera Beach, FL - Cleanup complete, PARM, PFAS impacts
- Worth Tailoring, Lake Worth Beach, FL - Bio-stimulation performance monitoring (post 3 months and post 6 months) Site Rehabilitation Completion Order (SRCO) through active remediation, SRCO
- Vogue Cleaners, Boca Raton, FL - NFA through active remediation (SVE), SRCO
- Touch of Class Cleaners, Lake Worth Beach, FL - SRCO through Monitored Natural Attenuation (MNA).
- Dryclean World, Orlando, FL - SVE O&M, groundwater RAP for bio-stimulation at source, currently monitoring
- Weekley Lumber, Rockledge, FL - Chromated copper arsenate (CCA) wood treating site, source removal complete. Proposed remedial strategies for bound source below the water table.
- Skippers III, Cocoa, FL - MNA, source removal for nickel contamination PARM.
- Vick's Cleaners, Pensacola, FL - ISCO and SVE remedial actions.
- Ocala Plating, Ocala, FL - SRCO through MNA.
- Jimmy's Discount Cleaners, Fort Pierce, FL - PARM (SVE).
- Royal Bumper Plating, Tampa, FL - SRCO through active remediation.
- Former Sunbeam Cleaning, Winter Park, FL - Cleanup complete, PARM.
- Stroud Cleaners, DeLand, FL - SVE ISCO injections, PARM.
- Atlas Plating, West Palm Beach, FL - MNA, remedial action for hexavalent chromium contamination completed.
- Vick's Cleaners, North Davis Highway, Pensacola, FL - NFA-SRCO.
- Port Orange K-Mart, Port Orange, FL - Site assessment.
- Sunland Cleaners, Longwood, FL - Site assessment completed. SVE system installed.
- Classic Touch Cleaners, Winter Springs, FL - NFA.
- Comet Cleaners, Vero Beach, FL - MNA, SRCO
- Sun State Supply, Orlando, FL - MNA.
- Markham's Maytag Laundry, Alachua, FL - MNA, Additional deeper assessment plume not defined vertically or horizontally.
- Concord Cleaners #715, Tallahassee, FL - MNA.
- Milli Illi Dry Cleaners, Boca Raton, FL - NFA, SRCO.
- United Metals, Inc., Marianna, FL - Post cap monitoring.
- Davidsons Dry Cleaners, Labelle, FL - Site assessment of Mineral Spirits Dry Cleaner, NFA, SRCO.
- New Warrington Road and Navy Boulevard Pesticide Site, Pensacola, FL - Long-term monitoring, SRCO.
- Beggs Lane TCE Site, Pensacola, FL - Site assessment, MNA.
- Tortuga Site, Bradenton FL - Site assessment complete, remedial design and implementation of Bioremediation and. SVE system.
- Cormans Cleaners, Stuart FL - Site assessment complete, MNA., SVE System Design and implementaion
- Wedgewood Cleaners, Stuart FL- Site assessment complete, NFA, SRCO
- Wildwood Quality Cleaners, Wildwood FL- Site assessment was ongoing, ISR soil contamination (SVE system) complete. Vertical profiling and installation of deeper zone triple-cased wells.
- Palace Dry Cleaners, Apopka, FL - Site assessment complete, SVE system O&M, MNA.
- Former Kanner Comet Cleaners, Stuart, FL - Assessment complete, MNA, Proposed SRCO
- Former Village Cleaners, West Palm Beach FL - SVE System O&M, MNA.
- Former One Price Cleaners, Tequesta FL - NFA SRCO.
- West Florida Scrap Metal, Fort Walton Beach FL - PFAS site assessment, vertical profiling, and installation of multi-zone well clusters.
- Hartman Cleaners, Clearwater, FL - Site assessment complete, SRCO.
- Fabricare Cleaners, Tampa, FL - Site assessment ongoing, plume extended offsite,

Shawn, Ouellette, P.G. (continued)

- Dadeland Cleaners, Miami, FL - Site assessment complete, interim source removal SVE system remedial design and implementation.
- Warrickleen, Davie, FL - Site assessment complete, SRCO
- Roberts Cleaners Lighthouse Point Florida, SVE System, Chemical injections, PARM, SRCO
- Over 100 petroleum site assessments throughout the State of Florida under the Florida (SCAB/ATRP) State Petroleum Cleanup Program.

SFWMD CERP, Bolles Canal - Belle Glade, FL *

Geologist responsible for environmental assessment activities, geotechnical classifications, and remedial action planning and implementation for a canal conveyance improvement project with agrichemical impacts. Duties include environmental and geotechnical drilling oversight, work plan preparation report preparation, soil and sediment classification, and sampling. Ensured all samples and field and office procedures were conducted in accordance with the FDEP SOP Guidelines and SFWMD FQM.

Camp Murphy, Jonathan Dickinson State Park - Jupiter, FL *

Supervising Field Geologist for installation and design of monitoring wells, soil borings, and water column profiling, within a former shooting range containing buried and spent munitions. Work was completed in an environmentally sensitive ecosystem containing protected flora and fauna. The study included using direct push and auger-type drilling techniques and equipment to complete the project.

FDEP - Vero Beach and Punta Gorda, FL *

Project Manager and Field Lead to determine the impacts of a former underground storage tank (UST) discharges. Project duties included monitoring well design and installation, measuring water quality, and collecting groundwater and soil samples while maintaining a safe work environment following the Site-Specific Health and Safety Plan (SS-HASP). Report and proposal preparation and correspondence with the FDEP from the field to adjust work scope based on encountered field conditions. Equipment calibrations and maintenance of YSI and Horiba multi-meters, turbidimeters, and peristaltic pumps.

U.S. Army Corps of Engineers (USACE) Herbert Hoover Dike – Around the Waters of Lake Okeechobee, FL *

As a Field Supervisor Shawn conducted and directed the installation of soil borings, soil samples, and monitoring wells using hand augers and direct-push type drilling equipment while maintaining a safe work environment following the site-specific decontamination procedures for tools and equipment and HASP. The investigation focused on a remedial assessment and design associated with a 4000-gallon diesel fuel spill of a former control structure located within the Lake Okeechobee dike infrastructure. The investigation was conducted in extremely sensitive areas of the lake shore that are home to endangered wildlife and protected vegetation. The majority of the sampling and drilling area was conducted on a slope with an approximate 20-degree angle.

Naval Air Station (NAS), Boca Chica - Key West, FL *

Field Supervisor for installation and design of environmental monitoring wells, soil borings water column profiling, well abandonment, and well rehabilitation within NAS properties in Key West. Duties included using direct-push auger techniques to complete projects. Equipment troubleshooting and maintenance of electrical and mechanical components of track and truck-mounted drilling equipment, pumps, generators, and support vehicles.

Apalachee Correctional Institution - Sneeds, FL *

Field Supervisor for installation and design of free product recovery wells, source area forensic analysis, and recovery well installation within high-security areas of a state prison. Required specific logistics and coordination for working within secure areas of the active high-security facility.

Shawn, Ouellette, P.G. (continued)

FPL, St Lucie Nuclear Plant - St. Lucie County, FL *

Field Supervisor/Environmental Safety Supervisor responsible for well rehabilitation, well installation, and soil and water sampling within the power plant. Responsible for organizing and executing subcontractor activities that included drilling and installing monitoring wells, and pumping test wells. In addition, responsible for the installation and maintenance of monitoring wells within the Protected and Radiation Controlled Areas. Activities included collecting soil and groundwater samples around and inside the facility while ensuring nuclear radiation safety procedures were followed when working within the Protected and Radiation Controlled Areas. Activities included collecting soil and groundwater samples around and inside the facility while ensuring nuclear radiation safety procedures were followed when working within the Protected and Radiation Controlled Areas.

Maple Grove Cemetery - Kew Gardens, NY *

Geologist for evaluation of production well and return well performance in open hole geothermal loop with fouled well screens and system performance issues. Provided recommendations for rehabilitation of blocked well screens using a combination of surge and pump techniques combined with pressure scrubbers and submersible pumps. Effectiveness was measured with pre-and post-rehabilitation measurements by conducting pumping drawdown tests using submersible pumps, water level meters, turbidimeters, and borehole cameras.

Manatee Pocket Dredge Spoil Impoundment Area - Stuart, FL *

Field Supervisor. Field support to determine the impacts of dredge spoil placed inside earthen embankment. Project duties included project coordination, monitoring well design and Installation, measuring water quality, and collecting groundwater and soil samples while maintaining a safe work Environment. Equipment calibrations and maintenance of YSI and Horiba multi-meters, turbidimeters, and peristaltic pumps.

Hialeah Railyard - Hialeah, FL *

As a Field Supervisor/Geologist Shawn conducted and directed the installation of soil borings, soil samples, monitoring wells using hand augers and direct push and auger type drilling equipment while maintaining a safe work environment following the site-specific decontamination procedures for tools and equipment and HASP. The investigation focused on a remedial assessment of various source areas within the railyard. Portions of the investigation were conducted adjacent to and in between active train tracks with derailment devices and Amtrak appointed spotter assigned. The railyard work required a specific training course conducted by Amtrak with yearly refresher courses.

Ocala Wastewater Treatment Plant (WWTP) - Ocala, FL *

Project Manager and Field Lead to determine the impacts of a 1,800-gallon fluorosilicic acid spill that occurred on the property. Project duties included report and proposal preparation, monitoring well design and installation, measuring water quality, and collecting groundwater and soil samples while maintaining a safe work environment following the HASP. Equipment calibrations and maintenance of YSI and Horiba Multi-meters, turbidimeters, peristaltic pumps, and submersible pumps.

Subsurface Environmental Inc., EPA, Madison Industries Site, FL *

Field Supervisor. Well rehabilitation of blocked well screens using a combination of surge and pump techniques combined with pressure scrubbers and submersible pumps. Effectiveness was measured with pre-and post-rehabilitation measurements by conducting pumping drawdown tests using submersible pumps, water level meters and turbidimeters. Injection well design and implementation for large-chlorinated solvents plume. Well abandonment of suspected undermining and collapse of surface features conducted by previous drilling contractors during assessment. Site was an active chlorinated solvent plume that was using molasses as a nutrient source for bacteriological activity.

Shawn, Ouellette, P.G. (continued)

NASA Kennedy Space Center (KSC) - Cape Canaveral, FL *

As a Field Supervisor Shawn conducted and directed the installation of soil borings, soil samples, and monitoring wells using hand augers and direct push and auger-type drilling equipment while maintaining a safe work environment following the site-specific decontamination procedures for tools and equipment and HASP. The investigation focused on a remedial assessment of various source areas within the NASA KSC and contractor maintenance areas. The investigation was in high-security areas of the facility and secure launch areas and had to be coordinated with the launch schedules.

Bulls-Hit Ranch - Hastings, FL *

As a Geologist/Project Manager, Shawn was responsible for the exploration of mineable commodities including, sand, limestone, shell, aggregates, etc. Properties were identified using a combination of exploration drilling and records review and site selection by the client. The properties explored were generally 1,200 acres in size. A specific drilling regime was originated for the property. Selected media was then tested in a geotechnical laboratory and compared to Florida Department of Transportation (FDOT) specs to identify if mineable commodities were present on the selected parcels. Once identified the target material was evaluated to see if market prices could support a profitable mining operation. Additionally, the hydrogeology of the property was also studied to determine the best extraction (dewatering) approach and least invasive operation that could be profitable on the subject property. Project duties included all aspects from the proposal, fieldwork, client communications, report preparation, and invoicing.

Minto Homes, Townpark at Tradition - St Lucie County, FL *

As a Geologist, Shawn was responsible for the design and installation of surficial (semi-perched) and groundwater zone piezometers on proposed residential developments. The piezometers were typically installed within the proposed retention and existing wetland features. Mini-troll and Level troll water level and atmospheric leveling devices were utilized for in-situ data collection. Additionally, manual collection of water level measurements was conducted and logged to verify electronic data. Shawn was responsible for collecting field data, troubleshooting telemetry, and data collection and field documentation of onsite conditions. Data collection was achieved using field laptops, ATVs, 4x4 vehicles, and waders. Data were downloaded and inputted into computer software for analysis. The data was utilized in determining the hydrogeologic relationship of the proposed retention areas and the existing wetland features.

Various Projects for a Terracon Acquisition - St Lucie, Indian River, Martin Counties, FL *

As a Geologist, Shawn was responsible for project management, fieldwork, and report preparation for: geotechnical subsurface studies for residential and commercial developments, earthen embankments, roadways, bridges, and shoreline restoration. Fieldwork included drilling, surveying, permeability testing, soil classifications, groundwater, and soil sampling.

St Lucie County, Mine Educational Presentation - St Lucie County, FL *

As a Geologist, Shawn researched the local mining procedures, geologic and physical setting, hydrogeology, and material extraction and processing. A formal televised presentation was presented to the residents of St. Lucie County at the Board of County Commissioners to aid in future decisions on mine permitting applications. The workshop was designed to respond to the community on the potential health and construction-related issues that were voiced by residents surrounding the potential mining sites.

Miami International Airport - Miami, FL *

Staff Hydrogeologist for installation and sampling of petroleum and chlorinated solvent-impacted monitoring wells, within high-security areas of Miami International Airport. Required specific logistics and coordination for working within secure areas of the active high security facility.

Shawn, Ouellette, P.G. (continued)

Indian River Drive - St Lucie County FL *

As a geologist, Shawn researched and investigated the erosion and scouring of the western bank of the Indian River. In 2004, a category three and category two hurricane made landfall in this area within a two-week time frame. Several sections of the road were washed out and eroded as a result of the runoff from atop the slope and wave action on the bottom of the slope. The scope of the project involved investigating and armoring the slope and roadway along a 12-mile section along the western bank of Indian River Drive. The slope and western bank were improved with a concrete mat and water conveyance features. Shawn conducted field surveys both from land and shoreline within the 12-mile section of roadway to identify and investigate natural outcroppings of limestone and identify areas that were more susceptible and/ or resistant to the extreme weather conditions that were generated by the storms in 2004.

Exxon Mobil FDEP Pre-approval, Petroleum Cleanup Program, - Broward, Miami-Dade, St. Lucie, Palm Beach, Okeechobee and Collier Counties, FL *

Hydrogeologist. Site assessments, Phase I and II environmental audits, tank closures, remedial system installations, O&M of air sparge, SVE, and pump and treat systems. Shawn was responsible for supervising and conducting monitor well installations report and proposal preparation, measuring water quality, groundwater, soil and sediment samples, and decontamination of equipment from land and water. Equipment calibrations and maintenance of YSI and Horiba Multi-meters, turbidimeters, peristaltic pumps, centrifugal pumps, submersible pumps, organic vapor analyzers, FE, and CL meters. Ensured all samples and field and office procedures were conducted in accordance with the FDEP SOP Guidelines.

Gabrielle Skelton

Staff Scientist

PROFESSIONAL EXPERIENCE

Gabrielle serves as a Staff Scientist in the West Palm Beach office. Her responsibilities involve conducting Phase I Environmental Site Assessments (ESAs) consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. This includes researching the historical development and usage of properties, performing site reconnaissance, soil, air, and groundwater sampling, preparing written reports, and reviewing regulatory agency files.

Her experience includes conducting Stormwater Pollution Prevention Plan (SWPPP) inspections for commercial and residential developments. As a certified Florida Department of Environmental Protection (FDEP) Stormwater Pollution inspector, Gabrielle has the knowledge of federal, state and local permits which enables her to review and develop Construction SWPPPs, a requirement for the National Pollution Discharge Elimination System (NPDES) Generic Permit. Gabrielle also has experience with projects on sites in the FDEP petroleum programs. Gabrielle has experience with Phase 1 Environmental Site Assessments (ESAs) and soil, air, and groundwater sampling.

PROJECT EXPERIENCE

Palm Beach County Fire Rescue Station #40 – Boynton Beach, Florida

Staff Scientist. Prepared a Construction Storm Water Pollution Prevention Plan, in accordance with National Pollution Discharge Elimination System (NPDES) Generic Permit, for the development and integration of a stormwater system for a new Fire Rescue Station in Boynton Beach.

The Carlisle of Palm Beach Landfill Gas Sampling – Lantana, Florida

Staff Scientist. Terracon installed six methane monitoring probes on the property and subcontracted a driller to abandon six previously existing monitoring wells on-site in accordance with Ch. 62-532.500(5) of the FAC. Terracon returned to the site to measure methane concentrations from the methane sampling points. Gabrielle was responsible for the measurement and recording of the methane concentrations.

Royal Palm Beach Commons Natural Attenuation Monitoring (NAM) – Royal Palm Beach, Florida

Staff Scientist. The project consists of a 160±acre parcel of land that was developed into a community park know as Royal Palm Beach Commons. The master plan of the park includes a community center; 9-hole executive golf course with a clubhouse, cart barn and starter hut; recreational area; horticultural center; community arts center; restaurant/sporting center; an access to roadway to all amenities; vehicular parking lots; and an extensive lake system for canoeing and kayaking. Terracon performed sampling and analysis during construction and source removal to assure that the construction contractor followed the project environmental specifications Terracon performed a comprehensive post-construction site assessment in accordance with Chapter 62-780, Florida Administrative Code (FAC). The site assessment report summarized all environmental assessment and remediation activities from 2007 through 2014. Terracon is currently performing long-term groundwater monitoring at the site in advance of site closure. Gabrielle is responsible for collecting groundwater samples and for assisting in the preparation of the NAM reports.

EDUCATION

Bachelor of Science in Environmental Studies at the University of Central Florida 2017

CERTIFICATIONS

FDEP Qualified Stormwater Management Inspector

OSHA 40 Hour HAZWOPER Training

WORK HISTORY

Terracon Consultants, Inc., Staff Scientist, 2021 - Present

Terracon Consultants, Inc., Field Scientist, 2020 – 2021

CMS Environmental Solutions, Environmental Analyst, 2018-2020

C-23/24 North Reservoir Project – Ft. Pierce, Florida

Staff Scientist. The project consists of eight tracts of land totaling 2,584 acres to be used to construct a Reservoir to provide water quality improvements in the Indian River Basin. Gabrielle provided oversight during demolition of point source locations and during source removal activities. She also conducted soil and groundwater sampling of point source locations.

LTC Ranch – Fort Pierce, Florida

Field Scientist. The project involved installation of temporary groundwater monitoring wells for the purpose of monitoring groundwater levels and groundwater quality parameters specified by the FDEP. Soil samples were collected and tested to determine arsenic levels. Gabrielle performed oversight during the removal of contaminated soil and ensured manifesting and documentation.

Fairfield Inn and Suites, Marriott, West Palm Beach, Florida

Field Scientist. Weekly and Post-Rain site inspections are conducted to ensure compliance under the NPDES Generic Permit. Gabrielle provided guidance to site superintendents, on the condition of their site and how to achieve complete compliance to avoid fines and possible site closure.

Greenacres Improvement, Phase 6 – Greenacres, Florida

Field Scientist. Prepared a Storm Water Pollution Prevention Plan, in accordance with National Pollution Discharge Elimination System (NPDES) Generic Permit, for the management of the stormwater system in a residential area of Greenacres.

L-15 Canal – Belle Glade, Florida

Field Scientist. Within the West Palm Beach Field Station Area along the east side of the L-15 canal, east of Browns Farm Road six culverts to be replaced. Gabrielle assisted in determining whether surficial soils at the site are suitable for excavation and disposal based on the potential presence of agrochemical residues. She also assisted in the preparation a letter report providing results and recommendations.

STA-1 West – Belle Glade, Florida

Field Scientist. Included seven parcels of land known as the STA-1 West Expansion No. 2 to delineate non-point and point sources. Gabrielle provided oversight during demolition of point source locations and during source removal activities. She also conducted soil sampling of point source locations.

Former Agriculture Property – Ft. Pierce, Florida

Field Scientist. Conducted a Phase I ESAs consistent with the procedures included in ASTM E1527-13.

Vacant Parcel – West Palm Beach, Florida

Field Scientist. Conducted a Phase I ESAs consistent with the procedures included in ASTM E1527-13.

DR Horton- Various locations in South Florida *

Environmental Analyst. For 18 single family home communities, weekly and post-rain site inspections were conducted to ensure compliance under the NPDES Generic Permit. Gabrielle provided guidance to site superintendents, on the condition of their site and how to achieve complete compliance to avoid fines and possible site closure.

* Work performed prior to joining Terracon.

APPENDIX F
DESCRIPTION OF TERMS AND ACRONYMS

Term/Acronym	Description
ACM	<p>Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining).</p> <p>Regulatory agencies have generally defined ACM as a material containing greater than one (1) percent asbestos, however some states (e.g., California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable.</p> <p>Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.</p>
AHERA	Asbestos Hazard Emergency Response Act

Term/Acronym	Description
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally Exempt Small Quantity Generators
CFR	Code of Federal Regulations

Term/Acronym	Description
CREC	Controlled Recognized Environmental Condition is defined in ASTM E1527-21 as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.”
DOT	U.S. Department of Transportation
EPA	U.S. Environmental Protection Agency
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

Term/Acronym	Description
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a “solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.”
HREC	Historical Recognized Environmental Condition is defined in ASTM E1527-21 as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”
IC/EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.
ILP	Innocent Landowner/Operator Program
LOG	Large Quantity Generators
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.

Term/Acronym	Description
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.

Term/Acronym	Description
pCi/L	picoCuries per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.
Radon	<p>A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in picoCuries per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.</p>
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ('cradle to grave'). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.
RCRA CORRACT S/ TSDs	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.

Term/Acronym	Description
RCRA Non-CORRACTS/ TSDs	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-21 as 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.
SCL	State "CERCLIS" List (see SPL /State Priority List, below).
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.
SPL	State Priority List. State list of confirmed sites having contamination in which the state is actively involved in clean up activities or is actively pursuing potentially responsible parties for clean up. Sometimes referred to as a State "CERCLIS" List.
SQG	Small Quantity Generator
SWF/LF	State and/or Tribal database of Solid Waste/Landfill facilities. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.
TPH	Total Petroleum Hydrocarbons

Term/Acronym	Description
TRI	Toxic Release Inventory. Routine EPA report on releases of toxic chemicals to the environment based upon information submitted by entities subject to reporting under the Emergency Planning and Community Right to Know Act.
TSCA	Toxic Substances Control Act. A federal law regulating manufacture, import, processing and distribution of chemical substances not specifically regulated by other federal laws (such as asbestos, PCBs, lead-based paint and radon). 15 U.S.C 2601 et seq.
USACE	United States Army Corps of Engineers
USC	United States Code
USGS	United States Geological Survey
USNRCS	United States Department of Agriculture-Natural Resource Conservation Service
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-21, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	State and/or Tribal facilities included as Voluntary Cleanup Program sites.
VOC	Volatile Organic Compound

Term/Acronym	Description
Wetlands	<p>Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The <u>Corps of Engineers Wetlands Delineation Manual</u> (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present.</p> <p>The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.</p>
